

30/60/90-Day Plan

INTERVIEW PREP | SKILL: INTERVIEW | DIFFICULTY: INTERMEDIATE | EST. 15 MIN

Reviewed professional resource - AmplifyHub Practical Resource Library

Overview

A template for a realistic first-90-days plan you can talk through in an interview - learning the product and market first, then building activity, then improving results.

Learning objectives

- Show a sensible ramp from learning to results
- Set realistic, modest early goals
- Focus first on learning, not big numbers
- Demonstrate ownership of your own development

The plan

Phase	Main focus	Example goals
First 30 days	Learn	Product, ICP, tools, shadow calls, first practice calls.
Days 31-60	Build activity	Consistent daily outreach, refine opener, ask for feedback.
Days 61-90	Improve results	Raise quality, book meetings, review what is working.

Draft your version

- One learning goal for the first 30 days: _____
- One activity habit for days 31-60: _____
- One quality or results goal for days 61-90: _____
- How you will ask for and use feedback throughout: _____

Professional standard

Professional interview preparation connects honest evidence to the employer's real requirements. Answers should be structured enough to follow, flexible enough for dialogue, and precise about what you personally did and learned.

Professional workflow

1. Study the job description and company before completing the resource. Match your preparation to the actual role rather than a generic sales interview.
2. Build answers from real evidence: work, study, volunteering, projects, or deliberate practice. Label estimates honestly and never invent experience.
3. Practise aloud with a timer, then repeat with a follow-up question or interruption. Strong answers stay clear when the conversation changes.
4. Ask a reviewer or the AI Coach to score clarity, evidence, relevance, and concision. Convert broad feedback into one specific revision.
5. Prepare a concise version and a fuller version of each answer. Use the concise version first and add detail only when the interviewer asks.

Quality-control review

Review point	Professional standard	Warning sign
Relevance	The answer addresses the role requirement and the exact question asked.	A polished story is used even when it does not answer the question.
Evidence	Actions, decisions, and results are specific and attributable.	Team outcomes are claimed as personal achievements.
Structure	The answer has a clear beginning, evidence, and conclusion.	Context expands while the important action remains vague.
Reflection	Learning and future application are stated honestly.	The answer ends with a result but shows no self-awareness.

Evidence and improvement signals

- Time both a 60-90 second version and a fuller two-minute version of key answers.
- Map every prepared example to the job requirement it supports.
- Record follow-up questions you struggled with and strengthen the underlying evidence.
- Review accuracy, clarity, and relevance before trying to sound more impressive.

Worked example (30-day goal)

"In my first 30 days I want to know the product well enough to explain the top three problems it solves in plain language, and to have completed a set of practice calls with feedback." Modest, specific, and focused on learning - exactly what a hiring manager hopes to hear.

Safe-practice note

Keep early targets realistic; over-promising specific numbers you cannot control can backfire. Frame the plan around learning and effort, which you can control, rather than guaranteed results. Adjust it to the actual role.
