

"Send Me an Email" Redirect

SCRIPT | SKILL: OBJECTIONS | DIFFICULTY: BEGINNER | EST. 5 MIN

Reviewed professional resource - AmplifyHub Practical Resource Library

Overview

A response to "just send me an email" that agrees happily, then asks one question so the email is actually relevant - without refusing to send it or turning it into a fight.

Learning objectives

- Agree to send the email without resistance
- Ask one question so the email is worth reading
- Set a light, optional next touch
- Accept that an email request can be a polite exit

Redirect in three beats

1. Say yes immediately - "Happy to."
2. Ask one question so you send something relevant, not generic.
3. Offer a small optional follow-up so the email is not a dead end.

Read the request honestly

Sometimes "send me an email" means "I am mildly curious," and sometimes it means "this is how I end calls politely." Both are fine. Ask your one question; if the answer is thin, send a short, genuinely useful email and let them come back on their own terms rather than pushing for a call they did not offer.

Professional standard

Professional objection handling is diagnosis, not debate. Acknowledge the concern, clarify it once, and respond only when there is useful information to add. Repeated or firm rejection ends the conversation.

Professional workflow

1. Research the account and role before editing the script. Record one observable business signal, one plausible problem to test, and the source that supports the signal.
2. Replace every bracketed placeholder with plain language you would genuinely use. Remove claims, customer names, statistics, and urgency that you cannot verify.
3. Read the script aloud at normal speed. Shorten any sentence that forces you to rush, breathe in the middle, or sound as if you are reading.
4. Practise three variations: the intended flow, an early interruption, and a clear no. The goal is calm adaptation, not perfect memorisation.
5. After use, record only the outcome category and one learning point. Adjust one line at a time so you know which change improved clarity or relevance.

Quality-control review

Review point

Acknowledgement

Professional standard

The response recognises the concern before asking another question.

Warning sign

The answer begins with a rebuttal or correction.

Diagnosis	One neutral question identifies timing, fit, value, authority, or information needs.	Several questions are stacked to wear down resistance.
Response	The reply addresses the stated concern with verifiable information.	The reply changes the subject or uses an unsupported claim.
Exit discipline	A clear no is thanked and respected immediately.	The same objection is challenged more than once.

Evidence and improvement signals

- Classify objections by underlying reason instead of memorising a separate comeback for every phrase.
- Review whether your clarifying question produced new information or simply prolonged the call.
- Track calmness and listening quality, not only meetings booked after an objection.
- Add a response to your playbook only after you can support it with accurate product or process information.

Worked example

"Happy to send that over. So I do not send you a generic overview - is weekend coverage the part that is actually painful, or is it more the onboarding side? ... Got it, I will keep the email focused on coverage. If it is useful, reply and I will share how two teams handled it. If not, no worries at all."

Safe-practice note

Always send the email you promised - refusing to send one unless they book a call is a bait-and-switch that burns trust. Keep it short and relevant, never mark it "urgent," and do not follow a single email with a barrage. If they do not reply, that is a legitimate answer.
