

Trigger-Event Opener

Script - Skill: prospecting - Difficulty: intermediate - Est. 7 min

Draft resource pending human editorial review - not yet professionally verified.

An opener built around a public event - funding, hiring, a launch, a leadership change - that connects the event to a plausible problem without pretending to know more than you do.

Learning objectives

- Reference a real, public trigger event
- Connect it to a problem the event often creates
- Stay tentative - you are guessing, and you say so
- Invite the prospect to confirm or correct you

Event to plausible problem

Trigger event	Problem it often creates
New funding round	Pressure to scale the team and process fast
Hiring a lot of one role	Onboarding and ramp become the bottleneck
New product launch	Support and sales volume spike unpredictably
New leader in the function	Reviewing tools and looking for quick wins

Keep it a hypothesis

- Say "I could be wrong" - because you might be.
- Ask them to confirm the problem, do not assert it.
- Use only public information; never imply insider knowledge.

Worked example

"Hi Marco, Sam with Northlight. I saw the announcement that you raised your Series A - congratulations. Usually when teams your size raise, the next few months are a scramble to add people without the process breaking. I could be off base, but is scaling the team cleanly something on your plate right now, or is that already handled?"

Safe-practice note

Reference only public, business-level information - never personal details or anything that suggests you have been digging where you should not. Present the connection as a guess the prospect can correct, not a fact. If your read is wrong, thank them and move on rather than arguing for your theory.
