

Top-Five Objection Conversation

SCRIPT | SKILL: OBJECTIONS | DIFFICULTY: INTERMEDIATE | EST. 10 MIN

Reviewed professional resource - AmplifyHub Practical Resource Library

Overview

Calm, non-pushy responses to the five objections beginners hear most - not interested, bad time, send an email, who are you, and we already have something - built on acknowledge, clarify, and offer a next step.

Learning objectives

- Acknowledge the objection before responding
- Ask one clarifying question instead of arguing
- Offer a low-pressure next step
- Recognise a firm no and exit respectfully

Five common objections

You hear	Acknowledge	Then ask or offer
"Not interested."	That is fair, thanks for being direct.	Ask one question about the reason, or offer to close out if it is a firm no.
"Bad time."	Completely understand.	Offer a specific alternative time to call back.
"Just send an email."	Happy to.	Ask one question so the email is actually relevant.
"Who are you / how did you get my number?"	Reasonable question.	Answer honestly and briefly, then give your reason for calling.
"We already have a solution."	That makes sense.	Ask what is working well and what they would change.

The pattern behind every response

- Acknowledge the concern genuinely, without sarcasm.
- Ask a clarifying question or offer a small, easy next step.
- Listen to the answer and respond to what they actually said.
- If the no is firm and repeated, thank them and end the call.

Professional standard

Professional objection handling is diagnosis, not debate. Acknowledge the concern, clarify it once, and respond only when there is useful information to add. Repeated or firm rejection ends the conversation.

Professional workflow

1. Research the account and role before editing the script. Record one observable business signal, one plausible problem to test, and the source that supports the signal.
2. Replace every bracketed placeholder with plain language you would genuinely use. Remove claims, customer names, statistics, and urgency that you cannot verify.
3. Read the script aloud at normal speed. Shorten any sentence that forces you to

rush, breathe in the middle, or sound as if you are reading.

4. Practise three variations: the intended flow, an early interruption, and a clear no. The goal is calm adaptation, not perfect memorisation.

5. After use, record only the outcome category and one learning point. Adjust one line at a time so you know which change improved clarity or relevance.

Quality-control review

Review point	Professional standard	Warning sign
Acknowledgement	The response recognises the concern before asking another question.	The answer begins with a rebuttal or correction.
Diagnosis	One neutral question identifies timing, fit, value, authority, or information needs.	Several questions are stacked to wear down resistance.
Response	The reply addresses the stated concern with verifiable information.	The reply changes the subject or uses an unsupported claim.
Exit discipline	A clear no is thanked and respected immediately.	The same objection is challenged more than once.

Evidence and improvement signals

- Classify objections by underlying reason instead of memorising a separate comeback for every phrase.
- Review whether your clarifying question produced new information or simply prolonged the call.
- Track calmness and listening quality, not only meetings booked after an objection.
- Add a response to your playbook only after you can support it with accurate product or process information.

Worked example

Prospect: "Not interested." You: "That is fair, thanks for being direct. Can I ask - is it that the timing is off, or that this kind of thing just is not a priority right now?"

If they say it is genuinely not a priority, respond: "Understood, I will not keep you. Thanks for the honesty."

Safe-practice note

These are conversation starters, not tricks to wear someone down. A reflex objection is worth one honest question; a firm, repeated no is a stop sign. Never imply consequences, guilt, or false scarcity to keep someone on the phone.
