

Script Personalization Canvas

Worksheet - Skill: script - Difficulty: beginner - Est. 12 min

Draft resource pending human editorial review - not yet professionally verified.

A structured canvas that turns a generic script into your own words for one specific type of prospect, filling in identity, reason, relevance, question, and likely objection.

Learning objectives

- Adapt each part of an opener to one prospect type
- Replace generic phrases with concrete language
- Prepare for the most likely objection
- Produce a script you can actually say aloud

How to use it

Pick one prospect type. Fill each row in your own words, then read the whole thing aloud and revise anything that sounds robotic. Keep it as a structure you can adapt, not a paragraph to memorise.

Canvas

Part	Your words
Identity (name + company)	
Reason for calling (honest)	
Relevance (problem they may have)	
Question (open, non-leading)	
Most likely objection + calm reply	

Worked example (Relevance row)

Generic: "We help businesses grow." Personalised: "Ops leads at courier firms your size tell me last-minute driver changes cause missed pickups." The second version names a real, observable problem the prospect can recognise.

Safe-practice note

Personalise with honest, observable details - never invent a shared connection or a fake result. Read it aloud so it sounds like you, not a telemarketer. Test it with the AI Coach before using it live.
